Recycling reduces pollution & litter

clearing the way towards a cleaner, greener and healthier society

Limit greenhouse gases

When paper degrades in a landfill it adds to the greenhouse gases in the air

Recycling paper saves landfills NOT trees!

Paper is NOT made from the wood of rainforests and indigenous trees. Paper is produced ONLY from plantation grown trees, just as bread is made from farmed wheat, etc.

1000 kg
of recovered paper saves

3 cubic metres
of landfill space
